

INVOKANA[®] fact sheet

You should **be confident in the medicine you take** and know the facts—and we're here to help. This fact sheet will let you know why INVOKANA[®] could be a great choice to help you **love your numbers** and give you a good background for your next doctor's visit.

how is INVOKANA[®] different?

Quick fact:

Taken by more than 1.5 million people and counting, INVOKANA[®] is helping people with type 2 diabetes love their numbers—and do more than just significantly lower their A1C.

INVOKANA[®] is the only once-daily type 2 diabetes pill approved to lower blood sugar (A1C) and reduce the risk of 3 major cardiovascular events:

heart attack

stroke

cardiovascular death

in adults with type 2 diabetes and established cardiovascular disease. It was also the first type 2 diabetes pill to help **reduce weight** and **systolic blood pressure**.*

*Not approved to lower weight or systolic blood pressure. Weight loss on average 2–3%. Lowered systolic blood pressure on average 3–5 mmHg. Results may vary by dose and when used alone or with metformin, sitagliptin, or insulin.

how does INVOKANA[®] work?

Quick fact:

Only INVOKANA[®] can help you lose about 100 grams of sugar a day through urination.

INVOKANA[®] works with your kidneys to reduce the amount of sugar allowed back into the body and sends some sugar out through the process of urination.

WHAT IS INVOKANA[®] (canagliflozin)?

INVOKANA[®] is a prescription medicine used:

- along with diet and exercise to lower blood sugar (glucose) in adults with type 2 diabetes
- to reduce the risk of major cardiovascular events such as heart attack, stroke, or death in adults with type 2 diabetes who have known cardiovascular disease. INVOKANA[®] is not for people with type 1 diabetes or with diabetic ketoacidosis (increased ketones in blood or urine). It is not known if INVOKANA[®] is safe and effective in children under 18 years of age

IMPORTANT SAFETY INFORMATION

INVOKANA[®] can cause important side effects, including:

- **Amputations.** INVOKANA[®] may increase your risk of lower-limb amputations. Amputations mainly involve removal of the toe or part of the foot; however, amputations involving the leg, below and above the knee, have also occurred. Some people had more than one amputation, some on both sides of the body. You may be at a higher risk of lower-limb amputation if you: have a history of amputation, have heart disease or are at risk for heart disease, have had blocked or narrowed blood vessels (usually in leg), have damage to the nerves (neuropathy) in the leg, or have had diabetic foot ulcers or sores. **Call your doctor right away if you have new pain or tenderness, any sores, ulcers, or infections in your leg or foot.** Your doctor may decide to stop your INVOKANA[®] for a while if you have any of these signs or symptoms. Talk to your doctor about proper foot care

Please read additional Important Safety Information for INVOKANA[®] on the following pages and full [Product Information](#), including Boxed Warning, and [Medication Guide](#) on www.INVOKANA.com.

INVOKANA[®] fact sheet (cont'd)

is INVOKANA[®] only for certain people with type 2 diabetes?

Quick fact:

Adults diagnosed with type 2 diabetes who are not at goal with their A1C can be considered for INVOKANA[®].

You and your doctor can decide if INVOKANA[®] is right for you. INVOKANA[®] can be used by itself as well as in combination with other medications, and it **can also work** for people **across** a range of A1C levels. In fact, in most clinical trials, the **majority** of people taking INVOKANA[®] **reached the ADA-recommended A1C goal of less than 7%**.

could there be side effects?

Quick fact:

All medications have the potential for side effects, some more serious than others.

The safety and efficacy of INVOKANA[®] has been **demonstrated** in studies that included **more than 17,000 patients** across 14 completed double-blind clinical trials.

INVOKANA[®] may increase your risk of lower-limb amputations.

You may be at a higher risk of lower-limb amputation if you:

- Have a history of amputation.
- Have heart disease or are at risk for heart disease.
- Have had blocked or narrowed blood vessels, usually in your leg.
- Have damage to the nerves (neuropathy) in your leg.
- Have had diabetic foot ulcers or sores.

The **most common side effects** of INVOKANA[®] include genital yeast infections and changes in urination, including an urgent need to urinate more often, in larger amounts, or at night. In clinical studies, when these common side effects occurred, they generally occurred early, were mild to moderate, and caused few patients to stop treatment.

You and your doctor can work together to help prevent, treat, or minimize some side effects. Basic self-care, like good hygiene and drinking plenty of water, can help when taking INVOKANA[®]—and for all people with type 2 diabetes, regularly checking your blood sugar and feet are always important.

INVOKANA[®] fact sheet (cont'd)

how much will INVOKANA[®] cost me?

Quick fact:

Most privately insured patients will have a co-pay as little as \$0* every month for INVOKANA[®].

We're here to help. There are options that may make your treatment more affordable.

Call 877-INVOKANA (877-468-6526) Monday–Friday, 8 AM–8 PM ET, and Janssen CarePath will help you investigate your cost support options.

INVOKANA[®] is also covered by most insurance plans and, if you have Medicare Part D, has preferred coverage for **over 90%** of patients.

*For most privately insured patients. Not valid for federally insured patients. Eligibility required. Visit INVOKANA.com for details. Subject to change. \$3,000 maximum program benefit per calendar year, subject to monthly limits.

Now that you know the facts, it's a great time to **talk to your doctor** to see if INVOKANA[®] can help you **love your numbers**.

IMPORTANT SAFETY INFORMATION (cont'd)

- **Dehydration.** INVOKANA[®] can cause some people to become dehydrated (the loss of too much body water), which may cause you to feel dizzy, faint, lightheaded, or weak, especially when you stand up (orthostatic hypotension). You may be at higher risk of dehydration if you have low blood pressure, take medicines to lower your blood pressure (including diuretics [water pills]), are on a low sodium (salt) diet, have kidney problems, or are 65 years of age or older
- **Vaginal yeast infection.** Women who take INVOKANA[®] may get vaginal yeast infections. Symptoms include: vaginal odor, white or yellowish vaginal discharge (discharge may be lumpy or look like cottage cheese), or vaginal itching
- **Yeast infection of the penis (balanitis or balanoposthitis).** Men who take INVOKANA[®] may get a yeast infection of the skin around the penis. Symptoms include: redness, itching, or swelling of the penis; rash of the penis; foul-smelling discharge from the penis; or pain in the skin around penis

Talk to your doctor about what to do if you get symptoms of a yeast infection of the vagina or penis.

Do not take INVOKANA[®] if you:

- are allergic to canagliflozin or any of the ingredients in INVOKANA[®]. Symptoms of allergic reaction may include: rash; raised red patches on your skin (hives); or swelling of the face, lips, tongue, and throat that may cause difficulty in breathing or swallowing
- have severe kidney problems or are on dialysis

Before you take INVOKANA[®], tell your doctor if you have a history of amputation; heart disease or are at risk for heart disease; blocked or narrowed blood vessels (usually in leg); damage to the nerves (neuropathy) of your leg; diabetic foot ulcers or sores; kidney problems; liver problems; history of urinary tract infections or problems with urination; are on a low sodium (salt) diet; are going to have surgery; are eating less due to illness, surgery, or change in diet; pancreas problems; drink alcohol very often (or drink a lot of alcohol in short-term); ever had an allergic reaction to INVOKANA[®]; or have other medical conditions.

Please read additional Important Safety Information for INVOKANA[®] on the following pages and full [Product Information](#), including Boxed Warning, and [Medication Guide](#) on www.INVOKANA.com.

IMPORTANT SAFETY INFORMATION (cont'd)

Tell your doctor if you are or plan to become pregnant, are breastfeeding, or plan to breastfeed. INVOKANA® may harm your unborn baby. If you become pregnant while taking INVOKANA®, tell your doctor right away. INVOKANA® may pass into your breast milk and may harm your baby. Do not breastfeed while taking INVOKANA®.

Tell your doctor about all the medicines you take, including prescription and non-prescription medicines, vitamins, and herbal supplements. Especially tell your doctor if you take diuretics (water pills), rifampin (used to treat or prevent tuberculosis), phenytoin or phenobarbital (used to control seizures), ritonavir (Norvir®, Kaletra® – used to treat HIV infection), or digoxin (Lanoxin® – used to treat heart problems).

Possible Side Effects of INVOKANA®

INVOKANA® may cause serious side effects, including:

- **Ketoacidosis** (increased ketones in your blood or urine). **Ketoacidosis has happened in people who have type 1 or type 2 diabetes**, during treatment with INVOKANA®. Ketoacidosis is a serious condition, which may need to be treated in a hospital. Ketoacidosis may lead to death. **Ketoacidosis can happen with INVOKANA® even if your blood sugar is less than 250 mg/dL. Stop taking INVOKANA® and call your doctor right away if you get any of the following symptoms: nausea, vomiting, stomach-area pain, tiredness, or trouble breathing**
- **Kidney problems.** Sudden kidney injury has happened to people taking INVOKANA®. Talk to your doctor right away if you: 1) reduce the amount of food or liquid you drink, if you are sick, or cannot eat or 2) you start to lose liquids from your body from vomiting, diarrhea, or being in the sun too long
- **A high amount of potassium in your blood (hyperkalemia)**
- **Serious Urinary Tract Infections:** may lead to hospitalization and have happened in people taking INVOKANA®. Tell your doctor if you have signs or symptoms of a urinary tract infection such as: burning feeling while urinating, need to urinate often or right away, pain in the lower part of your stomach (pelvis), or blood in the urine. Some people may also have high fever, back pain, nausea, or vomiting
- **Low blood sugar (hypoglycemia).** If you take INVOKANA® with another medicine that can cause low blood sugar, such as a sulfonylurea or insulin, your risk of getting low blood sugar is higher. The dose of your sulfonylurea medicine or insulin may need to be lowered while you take INVOKANA®

Signs and symptoms of low blood sugar may include: headache, drowsiness, weakness, dizziness, confusion, irritability, hunger, fast heartbeat, sweating, shaking, or feeling jittery.

- **A rare but serious bacterial infection that destroys the tissue under the skin (necrotizing fasciitis) in the area between and around the anus and genitals (perineum).** Necrotizing fasciitis of the perineum has happened in women and men who take INVOKANA®. Necrotizing fasciitis of the perineum may lead to hospitalization, may require multiple surgeries to remove affected tissues, and may lead to death. **Seek medical attention immediately if you have fever or you are feeling very weak, tired, or uncomfortable (malaise) and you develop any of the following symptoms in the area between and around your anus and genitals:** pain or tenderness, swelling, or redness of the skin (erythema).

Serious allergic reaction. If you have any symptoms of a serious allergic reaction, stop taking INVOKANA® and call your doctor right away or go to the nearest hospital emergency room.

Broken Bones (fractures): Bone fractures have been seen in patients taking INVOKANA®. Talk to your doctor about factors that may increase your risk of bone fracture.

The most common side effects of INVOKANA® include: vaginal yeast infections and yeast infections of the penis; changes in urination, including urgent need to urinate more often, in larger amounts, or at night.

Tell your doctor if you have any side effect that bothers you or that does not go away. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088. You may also report side effects to Janssen Scientific Affairs, LLC at 1-800-526-7736.
